Hello! My name is Abdul Ahad Bhatti. I am a full-stack software developer passionate about meeting my customer's needs.

After completing my Graduation from Comsats University Islamabad, Lahore. I joined @Microverse an American Based coding school where I am a Mentor, Reviewing students' code and implementing the skills as a full-stack software developer.

Moreover, apart from my current role I love guiding people which requires patience obviously in my respective field. Regularly I receive words of appreciation from the people I serve. That keeps me motivated to bring the same energy to my work.

I spent the last 4 months collaborating with people from several countries in remote development. We were building everything from Full-Stack web apps using all the latest technologies indeed.

These working experiences helped me develop many skills I use daily as a developer. These skills include problem-solving, effective communication, designing software solutions, and more.

• MY SKILLS***

Front-End: React, Redux, Bootstrap, HTML5, CSS3,

Languages: JavaScript, Ruby

Back-End: Ruby on Rails

Database: MySQL

Tools & Methods: Git, GitHub, Heroku, Netlify, Github Pages, ESLint, Figma, Adobe Photoshop
